

Trailing **Stop Loss**

If you don't have Binance API Keys you can use the guide at this URL:

<https://3commas.zendesk.com/hc/en-us/articles/360000221733-Binance-creating-an-API-key->

1) Log in with Binance API Keys.

A screenshot of the BlockchainWhispers 'Trailing Stop Loss' form. The form is titled 'Trailing Stop Loss' with 'Stop Loss' in a red box. Below the title is a descriptive paragraph: 'A Trailing Stop Loss is a Stop-Limit that shifts its sell price according to price growth determined by laziness(ratio). A Stop-Limit order is an order to buy or sell a coin once the price reaches a specified price. [view more](#)'. The form contains two input fields: 'API Key' with a yellow background showing the text 'VklZ3l6HTwtOJ2fNYkESiten8NgwgCjMXH1yULibB6Q5NNMRYkhVUOQjTknrJ2', and 'Secret Key' with a white background showing a series of dots. Below the secret key field is a note: 'We'll never share your Secret Key with anyone.' and a blue 'Submit' button.

Wait for your balances to load.

A screenshot of the BlockchainWhispers 'Trailing Stop Loss' form, showing the 'Available Balances' section. The form is titled 'Trailing Stop Loss' with 'Stop Loss' in a red box. Below the title is a descriptive paragraph: 'A Trailing Stop Loss is a Stop-Limit that shifts its sell price according to price growth determined by laziness(ratio). A Stop-Limit order is an order to buy or sell a coin once the price reaches a specified price. [view more](#)'. Below the paragraph is a label 'Available Balances:' followed by a white input field with a dropdown arrow on the right.

2) Select a coin from your available balances.

Trailing Stop Loss

A Trailing Stop Loss is a Stop-Limit that shifts its sell price according to price growth determined by laziness(ratio). A Stop-Limit order is an order to buy or sell a coin once the price reaches a specified price. [view more](#)

Available Balances:

BTC - 0.00006019

NEO - 0.00876000

BNB - 0.00001198

GAS - 0.01012165

ZRX - 0.58900000

DGD - 2.89510200

REQ - 0.46900000

MOD - 0.00203000

QSP - 0.37000000

ICX - 88.13650500

IOST - 0.24800000

BLZ - 525.07500000

NCASH - 0.41400000

ONT - 0.00814000

3) Select a trading pair.

Trailing Stop Loss

A Trailing Stop Loss is a Stop-Limit that shifts its sell price according to price growth determined by laziness(ratio). A Stop-Limit order is an order to buy or sell a coin once the price reaches a specified price. [view more](#)

Available Balances: BLZ - 525.07500000 Bluzelle

Update Balance

Trading Pairs:

BLZ/BTC

BLZ/ETH

BLZ/BNB

Trade

Current Price: 0.00007158 BTC

Stop Distance (%): 0.00007158 BTC

Limit Distance (%): 0.00007158 BTC

Trade Amount: BTC

Laziness (%): BTC

Trailing Stop

1m 30m 1h

BLZ / Bitcoin, 30, BINANCE

BLZBTC chart by TradingView

5) Set your trade. There is a limit of one order per trading pair, that means on each coin, for example ICX, you can make an order for BTC market and one for ETH market.

INFO

Current Price is the price of the coin on Binance in this moment.

Stop Distance(%) is like the normal stop loss on Binance, but you will set it with a percentage, a number from 1 to 99, this will calculate the stop loss at the percentage given as in input.

Limit Distance(%) is like the normal limit price on Binance when setting your Stop-Limit order, but you will set it with a percentage, a number from 1 to 99, this will calculate the limit price at the percentage given as in input. We recommend that a lower number than stop distance should be given as an input.

Trade Amount represents the amount of coins to put on a trade. You can use the slider to add, or type in a number of coins that you have in your balance.

Laziness(%) is the price at which the stop distance and limit distance will update their price. Please choose a laziness percentage above 0 (otherwise you will get blocked by Binance API, we recommend at least 0.05%)

Example:

Trade

Current Price	<input type="text" value="0.00007106"/>	BTC
Stop Distance (%)	<input type="text" value="5"/>	<input type="text" value="0.00006751"/> BTC
When the coin reaches this price the sell order limit is set. Distance is defined by a percentage. (max 99)		
Limit Distance (%)	<input type="text" value="5.1"/>	<input type="text" value="0.00006744"/> BTC
The sell order will be executed at this price. Distance is defined by a percentage (max 99, suggestion: less or equal to stop distance so order comes through quicker)		
Trade Amount	<input type="text" value="35"/>	<input type="text" value="0.0023604"/> BTC
Amount of selected coin to trade. <input type="range"/>		
Laziness (%)	<input type="text" value="0.05"/>	<input type="text" value="0.0000711"/> BTC
The sell order will be updated again when this price is reached. (max 99)		

Trailing Stop

6) Click Trailing Stop, wait for the order to set on the Binance server and it will appear in the interface under running orders.

Trade

Current Price BTC

Stop Distance (%) 0.00006757 BTC
When the coin reaches this price the sell order limit is set. Distance is defined by a percentage. (max 99)

Limit Distance (%) 0.00006750 BTC
The sell order will be executed at this price. Distance is defined by a percentage (max 99, suggestion: less or equal to stop distance so order comes through quicker)

Trade Amount 0.0023625 BTC
Amount of selected coin to trade.

Laziness (%) 0.00007117 BTC
The sell order will be updated again when this price is reached. (max 99)

Trailing Stop

1m 30m 1h 1d 1w 1M 3M 6M 1Y All

BLZ / Bitcoin, 30, BINANCE

Vol (20)

BLZBTC chart by TradingView

Running orders

Trading Pair	Amount	Current Price	Stop Price	Limit Price	Order Value	Lazy price	Remove Order
BLZBTC	35	0.00007113	0.00006768	0.00006761	0.00236635	0.00007128	Cancel

Now your order is running.

IMPORTANT!!!! If you close the server you have just opened using the install instructions the order you set in the application will stop from updating it's price even if you will reopen the server, your trail will be lost, but the order will still be on Binance at the last price it reached. You can close your browser, but not the server. If you close only your browser and reopen localhost:3000 your orders will still be running but in case you kill the server too, it will not be able to update the price anymore.

Please note that all orders that you make with the Trailing Stop Loss tool you should cancel with the **Cancel** button from **Running Orders**. even though there is the option to cancel from Binance, you might catch the trade in an intermediate state (price is updating and therefore this creates a new sell order, the one you just closed might not be the one which was just created).
